

Parking lot USB exercise

Elaborated by: Elpidio Marquez

Contents	Write 2-3 sentences about the types of information found on this device. The usb contains both personal and work information, not only from Jorge's but from his family and work colleagues. This information could be used to social engineer all of them. It will never be safe to mix personal files with work files as they can end up in the wrong hands.
Attacker mindset	Write 2-3 sentences about how this information could be used against Jorge or the hospital. The information in Jorge's drive could be used against the new hire as part of his PII is there, also the attacker could use the shift schedules to prepare a focused attack on someone on the team. Same applies for the family vacation plans and Wendy's wedding. Also the attacker could gain access to the employee budget and take advantage of that too.
Risk analysis	Write 3 or 4 sentences describing technical, operational, or managerial controls that could mitigate these types of attacks: The USB could have been hiding a trojan on one of the files or a ransomware that could have taken control of the whole computer or created a backdoor if found by another employee. A threat actor could have found PII or private business information, this information could have later been used to blackmail the company or individual.
